Answers Chemical Bonds Compounds

Polyatomic ions are groups of atoms bound together that act as a cation or anion to form bonds and make compounds. To answer this question, you need to know the formula of a nitrate . 8.

Chemical Bonds in Compounds Quiz - ThoughtCo

Chemical bonds are the bonds that hold elements to each other to form a compound. For instance the element Sodium and the element Chlorine come together in a "ionic" chemical bond which unite a metal, Sodium, with a gas, Chlorine to form a salt which as a compound has completely different properties than either of the elements exhibit.
