

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

1.1 Building Blocks of Geometry

- ✓ The midpoint of a segment is the point on the segment that is the same distance from both endpoints.
- ✓ The midpoint bisects the segment, or divides the segment into two congruent segments.

Example:

Study the diagrams below.

- Name each midpoint and the segment it bisects.
- Name all the congruent segments. Use the congruence symbol to write your answers.

a. $\overline{CF} \cong \overline{FD}$, so F is the midpoint of \overline{CD} ; $\overline{JK} \cong \overline{KL}$, so K is the midpoint of \overline{JL} .

b. $\overline{CF} \cong \overline{FD}$, $\overline{JK} \cong \overline{KL}$, and $\overline{MP} \cong \overline{PN}$.

Even though \overline{EF} and \overline{FG} appear to have the same length, you cannot assume they are congruent without the markings.

The same is true for \overline{MN} and \overline{NP} .
